Newsletter 2

„To study the abnormal is the best way to understand the normal.“

William James

Dear friends and visitors of the Existential Consciousness Research Institute,

Our second newsletter would like to introduce the world's leading authority in the field of near-death experience (NDE), the Dutch cardiologist Dr. Pim van Lommel. Due to the improved survival rate of critically ill patients, near-death experiences are on the rise. The experience of a near-death experience and its impacts are comparable in all cultures.

In Europe, about 20 million people have gone through a near-death experience. Transformative changes after a near-death experience might include the disappearance of fear of death and a stronger belief in life after death. Furthermore, people after a near-death experience report a highly developed sensitivity and interest in spiritual issues. If a near-death experience is not positively integrated into life, depression, a feeling of homelessness and loneliness could result.

In medical and psychological fields, there is a great demand for information on how to deal with this kind of unusual and profound experience of a patient. In his lecture at the World of Consciousness Conference 2018, Dr. Pim van Lommel will present his research findings on "endless consciousness" beyond death. Worthwhile information at minute 12 to a prospective study published in The Lancet 2001 and minute 40 about the conclusions :
